Foreword

Dear participants,

For almost 30 years now, RSA Conference in San Francisco has been the world's leading cybersecurity conference. So it's a pleasure for me to lead this promising delegation.

RSA Conference 2019 attracted over 42,000 attendees. With more than 740 speakers and 700 exhibitors, this year's conference is an excellent platform for promoting Dutch expertise in the areas of smart and secure infrastructures, Internet of Things security, and privacy.

The conference's setting also offers businesses a wealth of opportunities. Silicon Valley – with its access to prestigious research institutions like Stanford and Berkeley – is a household name in the world of cybersecurity and the birthplace of many successful tech companies.

What's more, the US is not only the world's largest economy, but also the Netherlands' main trading partner outside the EU. Over 800,000 US jobs are the result of Dutch companies operating or investing in the US. The Dutch pavilion at RSA and your participation in the conference will further enhance this strong transatlantic relationship.

The theme of this year's conference is 'the human element of cybersecurity', making it an opportunity to showcase Dutch businesses' innovative strength and trade potential. We are also highlighting the Netherlands' role as a leading player in cybersecurity, particularly with a view to the human aspects. In a world where cyberthreats are increasing, the Kingdom of the Netherlands advocates a rational and responsible cybersecurity industry, where ethical questions, privacy issues and user-friendliness are taken seriously.

I wish everyone a successful mission!

Peter Potman
Deputy Director-General for Foreign Economic Relations

Foreword

Welcome to Silicon Valley. I'm honored to host the Dutch cybersecurity businesses and organizations participating in this year's RSA Conference in San Francisco.

This year marks the first year that the Netherlands will have a pavilion at RSA. The Netherlands is a digitalized country, so it's no surprise that cybersecurity is ingrained in our policies to enhance security and stimulate economic growth. A few examples include cybersecurity on the internet of things, smart and secure infrastructures, tackling cybercrime, and fighting organized crime.

The Netherlands believes that the internet and its underlying infrastructure should be secure, resilient, and available. To create solutions for these security challenges, government, businesses, and universities work together on an integrated approach and outcome.

The Netherlands and the United States have been partners for more than 400 years. They share a deep bond founded on history and shared values rooted in strong beliefs of security, freedom, and justice. Cybersecurity is the next frontier. You all contribute to a continuing partnership between our two countries on these topics.

In 2020, the Netherlands celebrates 75 years of freedom after World War II, so it is even more important today to value and maintain our freedom. Cybersecurity is one way to maintain our freedom, but it also poses challenges to our privacy and individual freedoms. These are interesting topics to talk about.

I look forward meeting you and learning more about your work, business, and ideas. Kind regards,

Gerbert Kunst
Consul General of the Netherlands

Introducing the Netherlands

How do the Dutch make a difference?

Through their interactive approach to finding innovative solutions to the big challenges facing the world today. The Dutch way of thinking and working has been shaped by centuries of living in the low-lying delta of the Netherlands. Through the ages, the Dutch have joined forces to find ingenious ways to tackle challenges like water, urban-isation, energy, food, health and security. By being inventive, pragmatic and open to new challenges, the Dutch have created a flourishing and resilient land.

The Netherlands is a constantly evolving ecosystem of cities, industry, agriculture and nature, all integrated through smart infrastructure. It is a source of knowledge and experience that the Dutch are keen to share with others. Learning from the past to create a better future. Together, seeking sustainable solutions for the most liveable world.

Worldwide ranking

- 1st Best performing European Healthcare system (Euro Health Consume Index, 2017)
- 1st Production and auctioning of cut flowers and flower bulbs
- 1st World's largest flower exporter
- 2nd Number of patent applications per million inhabitants in the world (WIPO, 2016)
- 2nd Best at Global Innovation Index (GII, 2018)
- 2nd Largest exporter of agricultural products in the world (WTO, 2017)
- 4th At WEF's ranking of most competitive economies in the world
- 4th At RISE's global energy policy ranking
- 5th Largest exporter of goods in the world (652 billion US dollars)
- 5th Greatest place to live (World Happiness report, 2017)
- 6th At World Bank's Logistics Performance Index
- 7th Largest foreign investor in the world (1,256 billion US dollars)
- 7th Largest recipient of foreign investment in the world (801 billion US dollars)
- 8th Largest importer of goods in the world (507 billion US dollars)

Facts & Figures

- Official name Kingdom of the Netherlands
- Form of government Constitutional monarchy, parliamentary democracy
- Head of State His Majesty King Willem-Alexander, King of the Netherlands, Prince of Orange-Nassau
- Capital Amsterdam
- Seat of government The Hague
- Administrative structure Twelve provinces and the overseas territories of Aruba and Curaçao and St. Martin. The overseas islands of Bonaire, Saba and St. Eustatius, all three of which are situated in the Caribbean, are 'special municipalities of the Netherlands'
- Surface area 33.800 km²
- Location Western Europe, by the North Sea, bordering Belgium and Germany
- Number of inhabitants 17.2 million (July 2018)
- Number of inhabitants per km² 509 (July 2018)
- Currency Euro
- Languages Dutch and Frisian (On the overseas islands also English and Papiaments)
- GDP per capita 42,926 euros (FocusEconomics, 2017)
- 33% of Dutch GDP is derived internationally
- 1.3 bicycles for each person in the Netherlands
- Unemployment rate 5,4% (average 2007-2018)
- Moderate inflation 1.6% (average 2007-2018)
- 90% of all Dutch people speak English

Company profiles

CFLW Cyber Strategies

Cyberspace creates an infinite number of opportunities for innovation. Especially in combination with physical space, mobile devices and new cryptographic applications. At the same time, the digital transformation creates a whole series of new security challenges. Solutions are urgently needed given the pace of new technologies, but their implementation is by no means trivial given the borderless characteristics of the internet, the dominance of technology companies and our fast moving platform economies.

Mark van Staalduinen
Director

CFLW Cyber Strategies creates solutions at the intersection of strategy and technology. Co-creation, capacity building, capability roadmaps, feasibility studies, concept development and experimentation are typical approaches to realize innovations with the right sense of impact and timing. We are active within various international networks and with a global reach. We have a strong presence in Europe and Southeast Asia, from the Netherlands, Singapore and Vietnam respectively. Solutions are developed based on our long track record, international experience, technical foundation, sense of diplomacy and time-to-market.

Products and Services Offered

Strategic and Technological challenges with regard to Dark Web, Blockchain and IoT Security have our focus. Our solutions are based on in-depth expertise in cyber security, artificial intelligence, data analysis and IT innovation. Concrete solutions that we develop are Dark Web Monitor, Blockchain Security Solutions, Cyber-enabled Financial Crime analytics, Usability in Cyber Security and IoT Security Dialogues.

Unique Selling Points

- Long track record in the international security networks
- Deep understanding to get things done in Europe and Southeast Asia
- From proof of concept to managed services that work

Compumatica secure networks

Compumatica is a Dutch cyber security manufacturer specialized in crypto (network encryption, e-mail encryption) and network segmentation (firewall, Diode) and exists since 1991. The products have security certifications from The Netherlands, European Union and NATO. All products (software & hardware) are build and developed in Europe.

Petra van Schayik
CEO & Owner

Compumatica has more than 25 years of experience in the cybersecurity market and is the dedicated supplier of encryption communication systems to the Dutch- and European government. The products are developed without any backdoors and customers are allowed to check the source code.

We believe that the Cybersecurity market requires a tailor made approach. With our slogan *“cybersecurity with a personal touch”* we like to point out that customers are our first priority and they participate with us to determine our roadmap.

We are looking for value added partners both in The Netherlands, United States and Europe to collaborate on security projects.

Cybersprint

Cybersprint empowers cybersecurity professionals, from CISOs to analysts, to prioritise relevant risks. We offer full visibility using real-time, continuous, digital footprint monitoring and detection, from risk to remediation. We include your brand, organisation, infrastructure, VIPs, third parties and more. Our AI tools correlates dozens of data sources and uses a multitude of scanners, making risk relevant.

Cybersprint's Digital Risk Protection platform allows you to manage threats such as third party risk, cybercrime, brand abuse, data theft and more. Our zero-touch platform installs in minutes and can be complemented with off-the-shelf or bespoke services to complement your security programme.

Protect your organisation from:

- CEO-fraud
- Malicious hacks
- Third-party risks
- Data leaks
- Brand abuse

Guardian360

Guardian360 believes it's unfair that companies worldwide can't use their IT assets without being afraid of being hacked or being exposed to other IT security related threats.

In our vision the gap between the amount of staff needed to perform security tasks and the amount of staff requested will increase rapidly in the next couple of years. That's why we believe in automation and partnering with IT Service providers. By empowering system administrators and engineers to perform security tasks, the skill gap becomes smaller.

Also, we're absolutely convinced that security must be looked at as a process instead of a product or point solution. That's why all our offerings are based on continuous delivery of services and monthly subscriptions.

Guardian360 Lighthouse

The Guardian360 Lighthouse platform offers services to:

- Prevent security incidents from happening,
- Detect security issues quickly to lower the damage,
- Solve issues so business continuity is being assured.

The Guardian360 services not only focus on the technical side of IT security, but on compliance, processes and the human factor as well.

Services and subscriptions offered

- Continuous vulnerability scanning and monitoring of office networks, hosting environments, IOT/SCADA environments and web applications;
- Compliance module for recommendations to comply with GDPR and insights in deviations from 15+ norms and frameworks;
- Hacker Alert, detecting intruders in networks;
- Continuous phishing simulations to make staff more aware;
- Pentest subscription, continuous manual penetration tests;
- Cyber risk insurance.

Unique selling points

- SAAS offering for partners only;
- Subscription based;
- Multiple integrated services.

Profile of contacts wanted

We're looking for companies that are interested to become a Guardian360 partner. Also, we're always on the lookout for new technologies to add to our platform.

ING

ING is a global financial institution with a strong European base, offering retail and wholesale banking services to customers in over 40 countries in Western and Eastern Europe, Asia, and the Americas.

The purpose of ING is to empower people to stay a step ahead in life and in business.

Our broad customer base includes individuals, small and medium-sized businesses, large corporations, institutions and governments.

ING Bank has more than 54,000 employees. As at 31 December 2019, we had 38.8 million retail customers, with 13.3 million considered primary customers.

Sustainability forms an integral part of ING's strategy, evidenced by ING's ranking as Leader in the banks industry group by Sustainalytics and 'A' rating in MSCI's ratings universe.

ING Group shares are included in major sustainability and Environmental, Social and Governance (ESG) index products of leading providers STOXX, Morningstar and FTSE Russell.

ING Group shares are listed on the exchanges of Amsterdam (INGA NA, INGA.AS), Brussels and on the New York Stock Exchange (ADRs: ING US, ING.N).

Ministerie van Defensie

Ministry of Defence

The Ministry of Defence is setting up an innovation hub for cybersecurity to accelerate cybersecurity innovation and deployment in the organisation. The aim is to work with the best universities and high-end innovative start-ups and scale-ups.

Digital systems are playing an ever greater role in intelligence and security. For that reason, the Netherlands armed forces aims to tackle the threats associated with the digital domain, or cyberspace. Next to sea, land, air and space, cyberspace is the fifth operational domain of the Netherlands armed forces.

Municipality of The Hague

In The Hague, The Netherlands, talented people work together on innovations for a more secure world.

The Hague, the third largest city in The Netherlands, is considered the International City of Peace & Justice and attracts international organizations, talent and innovators that want to make a difference.

The Municipality of The Hague actively works on stimulating innovation and (international) collaboration in the field of cybersecurity.

This has led to the development of The Hague as an important hub for cybersecurity in Europe and a flourishing cluster around security and new technology called The Hague Security Delta (HSD).

The cluster has a strong foundation in The Hague region, due to the presence of Europol's European Cybercrime Centre, NATO Communications and Information Agency and the Dutch cybersecurity, intelligence and security agencies.

Amongst others the cluster facilitates the soft-landing of international organizations, talent and innovators in the Dutch security ecosystem.

Payatu

Hardware.io is a security conference for the hardware and security community. The conference revolves around the objective of four primary concerns (BETA) – backdoors, exploits, trusts, and attacks – in hardware, firmware, and associated protocols.

We are invested in nurturing people through the sharing of information and knowledge. Researchers come here to discuss and display their innovative research in the field of hardware security. People leave with better ideas that they can apply in actions to grow professionally. Our main customers are security researchers and engineers from various OEMs and security service providers; CISOs and CTOs; people from academia and governmental institutions; students; and others.

Hardware.io is organized by a team of geeky, funny, lovely, and quirky people. We believe that people do their best work when they follow their passion and are left free to deploy their talents completely. We are guided by the motive to make the hardware landscape safe and secure for everybody. We have a small team to maximize focus and clarity. Our registered offices are:

- Payatu BV - The Hague, Netherlands (Head Office)
- Hardware Inc. - Bay Area, California, U.S.

Products and Services Offered

- Hands-on Training Sessions on various hardware security topics
- International conference with technical talks, workshops, villages, and exhibition area
- Hardware CTF and HardPwn (IoT device hacking challenge)

Unique Selling Points:

- Providing knowledge on hardware security via technical talks and practical training sessions
- Creating an environment for successful networking for security professionals and companies
- Sponsorship and exhibition opportunities for companies to share their knowledge and showcase their products and services to the security community
- Recruitment opportunities for companies and researchers
- Support and participation of renowned security professionals across the globe

Profile of Commercial Contacts Wanted:

Looking for matchmaking with companies that might be interested in sending their team to learn, presenting innovative research, sponsoring or exhibiting at the conference and reach out to the security community in Europe and North America.

Melanie Rieback
Co-Founder/CEO

Radically Open Security

Radically Open Security is the world's first not-for-profit computer security consultancy. We operate under an innovative new business model whereby we use a Dutch fiscal entity, called a "Fiscal Fund raising Institution", as a commercial front-end to send 90% of our profits, tax-free, to a not-for-profit foundation, Stichting NLnet. The NLnet Foundation has supported open-source, digital rights, and Internet research for almost 20 years.

In contrast to other organizations, our profits do not benefit shareholders, investors, or founders. Our profits benefit society. As an organization without a profit-motive, we recruit top-name, ethical security experts and find like-minded customers that want to use their IT security budget as a "vote" to support socially responsible entrepreneurship. The rapid pace of our growth reflects the positive response the market has to our idealistic philosophy and innovative business model.

Radically Open Security has left an indelible mark on the security industry of the Netherlands. We have spurred a public discourse about the ethics of computer security consultancy. Our competitors have also moved towards more openness and transparency – because customers are increasingly demanding it. (Now that there is a "fair trade" commercial alternative on the market.) Our success has been further validated by the prizes we have won: the Dutch Chamber of Commerce ranked Radically Open Security as the 50th Most Innovative SME in the Netherlands. CIO Magazine called Melanie Rieback the "Most Innovative IT Leader" of the Netherlands and Rieback was named one of the 9 Most Innovative Women in the European Union (EU Women Innovators Prize) in 2019.

Royal Philips

Royal Philips of the Netherlands is a leading health technology company focused on improving people's health and enabling better outcomes across the health continuum from healthy living and prevention, to diagnosis, treatment and home care. Philips leverages advanced technology and deep clinical and consumer insights to deliver integrated solutions. The company is a leader in diagnostic imaging, image-guided therapy, patient monitoring and health informatics, as well as in consumer health and home care. Philips generated 2018 sales of EUR 18.1 billion and employs approximately 80,000 employees with sales and services in more than 100 countries.

The Hague Security Delta

The Dutch security cluster 'The Hague Security Delta' (HSD) is a network of businesses, governments and knowledge institutions that work together on innovative security solutions and knowledge development. In this network, security issues are discussed and knowledge is shared on cyber security, national and urban security, protection of critical infrastructures, and forensics. The HSD partners have a common goal: a more secure world, more business activity and more jobs. The core of the security cluster is the HSD Campus, the national innovation centre for security in The Hague.

TNO

TNO connects people and knowledge to create innovations that boost the competitive strength of industry and the well-being of society in a sustainable way. With over 3,200 professionals at TNO, we work in collaboration with partners and focus on nine domains. One of the cross cutting themes is cybersecurity.

Annemarie Zielstra

Director/Principal Consultant
Cyber Security & Resilience TNO

TNO and CFLOW Cyber Strategies will organise the 1st IoT Security Dialogue during the RSA Conference 2020 in San Francisco

Synopsis

IoT Security is one of the major challenges of the new decade. Whether we consider the privacy and security risk of individual devices or the risk of massive cyber-attacks exploiting the limited resources to large numbers of IoT devices. New solutions are required to be adopted and implemented at-large. At the same time the full solution is not clear. Can we approach every IoT device with the same solution or does every sector or every device require specific security solutions. The first IoT Security Dialogue envisions to discuss about tangible solutions and answer the question whether these are generic or sector specific.

Sandro Etalle

Full Professor

TU/e - Eindhoven University of Technology

Eindhoven University of Technology is a young university, founded in 1956 by industry, local government and academia. Today, their spirit of collaboration is still at the heart of the university community. We foster an open culture where everyone feels free to exchange ideas and take initiatives.

Personal attention and room for talent

Eindhoven University of Technology offers academic education that is driven by fundamental and applied research. Our educational philosophy is based on personal attention and room for individual ambitions and talents. Our research meets the highest international standards of quality. We push the limits of science, which puts us at the forefront of rapidly emerging areas of research.

Scientific curiosity with a hands-on mentality

Eindhoven University of Technology combines scientific curiosity with a hands-on mentality. Fundamental knowledge enables us to design solutions for the highly complex problems of today and tomorrow. We understand things by making them and we make things by understanding them.

TU/e and Brainport: a thriving ecosystem

Our campus is in the center of one of the most powerful technology hubs in the world: Brainport Eindhoven. Globally, we stand out when it comes to collaborating with advanced industries: We top the worldwide CWTS ranking in scientific cooperation with industry. Together with other institutions, we form a thriving ecosystem with one common aim – to improve quality of life through sustainable innovations.

EclecticIQ

EclecticIQ enables intelligence-powered cybersecurity for government organizations and commercial enterprises. We develop analyst-centric products and services that align our clients' cybersecurity focus with their threat reality. The result is intelligence-led security, improved detection and prevention, and cost-efficient security investments.

Raymon van der Velde
Founder & VP Product

Our solutions are built specifically for analysts across all intelligence-led security practices such as threat investigation, threat hunting, and incident response, and are tightly integrated with their IT security controls and systems.

EclecticIQ operates globally with offices in Europe, United Kingdom, and North- America, and via certified value-add partners.

Products

- EclecticIQ Threat Intelligence Platform
EclecticIQ Platform is a Threat Intelligence Platform (TIP) that empowers threat analysts to perform faster, better, and deeper investigations while disseminating intelligence at machine-speed.
- EclecticIQ Fusion Center
Providing fully fused multi-source threat intelligence bundles to fit your needs and budget

Key selling points:

- The cornerstone of your CTI practice
- Comprehensive workflow
- Integration with essential threat intelligence
- A global community of contributors
- Freeing up your analysts to focus on what matters
- Prioritizing your security efforts using higher quality intelligence
- Removing the overhead of managing multiple intelligence suppliers

InnovationQuarter

InnovationQuarter is the regional economic development agency for the Province of Zuid-Holland, also known as the greater Rotterdam – The Hague area. Our mission is to strengthen the regional economic structure by stimulating the innovation potential of this unique delta region. In close collaboration with all major corporations and many SME's, educational and research institutes as well as government organisations, we align the efforts required to design a brighter tomorrow.

Our efforts include:

- Assisting foreign companies in setting up their business in the greater Rotterdam – The Hague area;
- Assisting Dutch companies in their overseas expansions;
- Investing in promising innovative businesses in the region;
- Accelerating regional innovation projects.

On2IT
Global SOC-as-a-Service Provider

ON2IT is a global pure-play cybersecurity service provider with Dutch origins. ON2IT combines its innovative Zero Trust Security Automation & Orchestration Platform with a team of security analysts who can respond in real time to disrupting security events. The ON2IT Zero Trust SOC analysts hunt for, investigate and respond to known and unknown threats and effectively become an extension of your in-house team.

ON2IT has more than a decade of experience in helping its worldwide customers comply with growing regulatory requirements, such as Europe's General Data Protection Regulation (GDPR), and can offer maximum assurance that client's businesses are not compromised. Clients have immediate access to ON2IT experts without the challenge of hiring and retaining skilled cybersecurity professionals.

Our Zero Trust Risk Framework

The ON2IT Zero Trust Readiness Assessment performs a guided assessment on the three organizational levels of strategic, management and operations categories and scores every attribute. The assessment determines the objective for every topic and rates if the business is ready for the required services. Based on the results, CISO's can determine the GAPs and develop an implementation and improvement plan. The Progress Monitor in the ON2IT portal monitors and reports the progress of the implementation during the change as well as the run phases and enables informed decisions on for required actions, budgets and resource allocations.

Secura

Secura is an independent, specialised security expert company. We help organisations by providing valuable insight into their digital security from a people, process and technology perspective.

Our services focus on:

- information security,
- infrastructure security (IT),
- application security
- embedded security (incl IoT / OT),

We cover four markets: critical infrastructure, technology, finance and public.

Secura offers world-class advisory, audit, test and training services. We link our audit and test work to international norms, standards and metrics. For instance: ISO 27.001, IEC 62.443, Common Criteria and various IoT standards.

We have a highly dedicated and knowledgeable team ready to identify, reduce and prevent digital security risks, in a structured way and on a continuous basis.

Secura is your independent, trusted security partner taking care of all your digital security needs.

ThreatFabric

Born out of financial institutions' rising issue with cybercrime and fraud, ThreatFabric provides the pertinent tools and expertise to deflect risk and avoid fraud.

With over a decade of expertise in the domain of cybercrime and fraud, our specialists have considerable knowledge about history and evolution of cyberthreats. It is that knowledge that has driven the conception of our innovative solutions, allowing us to provide you with future-proof cybersecurity.

In collaboration with banks, our cybersecurity experts have conceived intelligence-powered prevention and detection solutions, giving visibility on the risks posed by devices used to perform online transactions.

Our threat intelligence solution – MTI, provides the context and in-depth knowledge of the past and present malware-powered threats in order to understand the future of the threat landscape. Such intelligence includes both the strategic overview on trends and the operational indicators to discern early signals of upcoming threats and build a future-proof security strategy.

Our online fraud detection solution – CSD, provides financial institutions with the real-time overview on the risk status of their online channels and related devices. This overview contains all the relevant information and context to act upon threats before they turn into fraud. The connectivity with existing risk or fraud engines allows for automated and orchestrated, round the clock fraud mitigation.
